Seeking research positions in the areas of Computer Graphics and Computer Architecture and related fields. I am particularly interested in advancing fields related to how humans interact with computers and enabling new human experiences.

Research Interests

Computer Graphics: Rendering, Real Time Ray Tracing, Global Illumination, Video Games.

Computer Architecture: GPUs, Application Specific Architectures, Embedded Systems.

Education

University of Utah Ph.D. Computer Engineering 2013

Advisor: Erik Brunvand

Dissertation: Efficient Ray Tracing Architectures

University of California Riverside B.S. Computer Engineering 2006

Emphasis: Embedded Systems

Professional Experience

Harvey Mudd College Claremont, CA, USA

Visiting Professor July 2012 - Present

Taught courses in Digital Design, Parallel Computer Architecture, and Microprocessor and Embedded System Design. Advised research students in the area of computer architecture.

NVIDIA Santa Clara, CA, USA

Research Intern/Consultant June 2013 - Present

Power and performance modeling for future graphics hardware.

University of Utah Salt Lake City, UT, USA

Graduate Research Assistant June 2007 - August 2012

Developed a variety of architectures for real-time ray tracing, a cycle accurate simulator for performance studies, and a compiler back-end for the architectures.

Teaching Assistant August 2006 - May 2007

Assisted Dr. John Carter and Dr. Peter Shirley with courses in Operating Systems, Computer Graphics and Network Game Design.

University of California, Riverside Riverside, CA, USA

Undergraduate Research Assistant June 2005 - March 2006

Analyzed the performance of soft-core microprocessors on Xilinx FPGAs to develop tools for increased performance with reduced development effort. Advisor: Dr. Frank Vahid.

Skills

Languages : C, C++, Python, SystemVerilog, VHDL, Assembly, Javascript.

System simulators : Simics, TRaX Simulator

CAD Tools : Cadence SOC Encounter, Virtuoso, Spectre; Synopsys Design Compiler; Altera Quartus II; Microchips MPLAB; Xilinx ISE, EDK

Misc. : LLVM, OpenGL, GLSL, CUDA, Unity3D, PyOpenGL, Pyglet, SDL, Google App Engine, Django, MySQL, LATEX, Git, Subversion, Mac, Linux, Windows

Research Students Advised

- Andrew Carter, HMC CS B.S. 2013 (at LinkedIn)
- Max Korbel, HMC Engineering B.S. 2013 (at Intel)
- Paula Ning, HMC Engineering B.S. 2013 (at Intel)
- Jingbin Yang, HMC Engineering B.S. 2015 (expected)
- Dong-hyeon Park, HMC Engineering B.S. 2014 (at Univ. of Michigan PhD Student)
- Eric Storm, HMC Engineering B.S. 2015 (expected)
- Paul Jolly, HMC Engineering B.S. 2016 (expected)
- Fabiha Hannan, HMC Engineering B.S. 2016 (expected)
- Akhil Bagaria, HMC Engineering B.S. 2016 (expected)
- Ivan Wong, HMC Engineering B.S. 2015 (expected)
- Skyler Williams, HMC CS B.S. 2016 (expected)
- Ramy Elminyawi, HMC Engineering B.S. 2016 (expected)
- Amy Ngai, HMC Engineering B.S. 2016 (expected)
- Richard Piersall, HMC Engineering B.S. 2016 (expected)
- Kirklann Lau, HMC Engineering B.S. 2016 (expected)
- Andrew Fishberg, HMC Engineering B.S. 2016 (expected)
- Da Eun Shim, HMC Engineering B.S. 2016 (expected)

Funding and Donations

- \$400 Jetson TK1 Development boards. September 2014.
- \$1440 FPGA Donation from Altera. July 2013.
- \$2100 Microcontroller and Programmer Donation from Microchip. May-October 2013.
- University Teaching Assistant Award. Fall 2010

Awards and Honors

- Tau Beta Pi member since 2005
- University Teaching Assistant Award, Utah 2010-2011
- Best Paper Award, SASP 2008
- Chancellor's Scholarship, UCR 2000-2001
- University Honors Program, UCR 2000-2004

Professional Activities

- Member, IEEE
- Member, ACM
- Reviewer, Computers and Graphics (CAG) 2013, 2012

- Reviewer, High Performance Graphics (HPG) 2012, 2011, 2009
- Reviewer, Transactions on Circuits and Systems (TCAS) 2010

Teaching

- Digital Design and Computer Architecture; HMC E85; F2012, S2013, F2013, S2014, F2014, S2015
- Video Game Console Design; HMC E190X (in development): S2015
- Microprocessor Design; HMC E155; F2012, F2013, F2014
- Advanced Parallel Computer Architecture; HMC E190O (new class); S2013
- Advanced Embedded Systems; HMC E190P (heavy revision); S2014
- Parallel Hardware Ray Tracing; Utah CS6965; F2011

As a teaching assistant:

- Kinetic Sculpture and Engineering; Utah CS5968/Art4455; F2010
- Introduction to Computer Graphics; Utah CS5600; S2007
- Network GameDesign; Utah CS59XX; S2007
- Operating Systems; Utah CS5460/6460; F2006

Game Projects

Wizard Fight Race

Led a group of four contributors in developing a game from scratch using the Unity game engine. This project was meant to see what a group of relatively inexperienced developers could do in comparison to other 72-hour game development projects that more well-established game developers participate in. (Executable downloads available at <https://sites.google.com/site/72hourgame/download>).

PyGauntlet Open Source Game

PyGauntlet is a game project in Python from an undergraduate software engineering course where a group of 7 students developed a game over 8 weeks. After the course finished, I took over the lead of it and obtained permission to release the source code and continue development. I added an OpenGL based renderer to the engine and introduced engine optimizations to allow the game to run well even on slower processors. (Source code available at <http://code.google.com/p/pygauntlet/>).
